

CERAMIC HEATSINK INTRODUCTION

MPC Property-Natural Convection & Heat Radiation

Using MPC as a heat sink, the MPC Structure provides very large surface area to contact air and has excellent property of Heat Dissipation and Heat Convection.

**General Structure
Metal series**

Regular arrangement

Micro-Pores Structure

Irregular arrangement

MPC Property-Low Thermal Capacity

- We utilize the ceramic with the property of high thermal dissipation and the low thermal capacity for heat sinking.

Low Thermal Capacity:

In chart (1), it shows copper is the material with lowest thermal Capacity.

But in chart (2), we find the thermal capacity of copper is the highest than that of aluminum and MPC in term of unit volume. MPC is the lowest thermal capacity material in unit volume. **MPC dissipates heat faster than metal Heat Sink without storing heat within itself.**

	Density (g/cc)	Thermal conductivity (W/m-k)	Thermal capacity (J/g-°C)
Cu	8.96	385	0.385
Al	2.7	210	0.9
MPC	1.8	125	0.67

Chart(1)

	Volume (cm ³)	Weight (g)	Thermal capacity of Unit volume
Cu	1	8.96	3.45
Al	1	2.7	2.43
MPC	1	1.8	1.206

Chart(2)

MPC Property- Heat Convection

○ Heat Convection:

The surface area of MPC is greater than the metal Heat Sink by about 30%. Hence, MPC has more surface area to contact air, the convection medium. MPC can dissipate more heat in a unit time. Test result as next page::

Test Equipment

Test Condition :

-Heater Type : Dummy Heater

-Heater Material: Copper

-Heater Size:30*30*8(mm)

-Convection Condition:

fanless, airless

-Conduction medium:

Thermal Grease (k=2)

Heat Dissipation Ability Comparison Sheet

Material	Photo	Heat Sink Dimension	Water Temp	Thermal Resistance	Thermal Resistance Variation	Power of Heater	Ambient Temp
Without Heat Sink		-	86.44 °C	11.16°C/W	-	5.06 W	29.95 °C
MPC		30*30*2.5mm	82.14 °C	10.21°C/W	-11.9%	5.06 W	30.5 °C
Copper		30*30*2 mm	86.38 °C	11.09°C/W	-0.6%	5.06 W	30.26 °C
Aluminum		30*30*2 mm	85.3 °C	10.93°C/W	-2%	5.06 W	30 °C

Result: We find that MPC has better Heat Dissipation ability than metal Heat Sink in a natural convection environment

MPC Application Introduction

Digital Photo

LED LCD TV

Set Top Box

Mother Board

Broadband

Media Player

Solar System

Power Adaptor

A pplication-LED & LCD TV GPU

Application : Samsung LED TV Series

Advantage : Low profile 、 Insulation

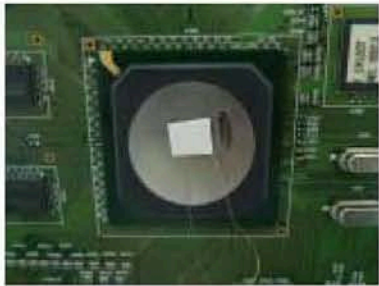

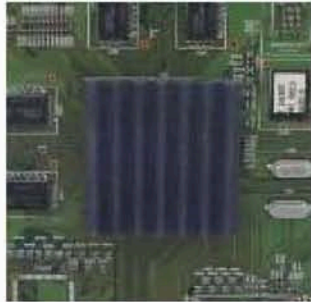

EMI Shelter 、 Heat Sinking

MPC Spec. : 40*40*5 Wave Type

30*30*5 Wave Type

Test Report of LED TV

Test sample	Without Heat Sink			40*40*5 Wave Type		
PHOTO:						
No	IC Temp(°C)	Room Temp(°C)	$\Delta T = IC - Room$	IC Temp(°C)	Room Temp(°C)	$\Delta T = IC - Room$
1	85.2	24.5	60.7	80.3	25.1	55.2
2	84.5	24.3	60.2	80.6	25.1	55.5
3	83.7	23.2	60.5	80.3	25.1	55.2
4	83.6	23.3	60.3	79.8	25	54.8
5	83.9	23.2	60.7	79.7	24.6	55.1
average	84.18	23.7	60.48	80.14	24.98	55.16

Remark : The ambient temperature inside LED TV is around 52 °C

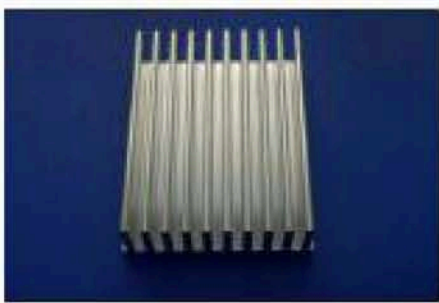

Test Result : MPC can reduce 5.3°C = (60.48 - 55.16)

Ceramic Heat Sink V.S Aluminum Heat Sink

IC : Power IC

IC Size : 20*15(mm)

Test Date : 2010/4/21
